

Daniel Eduardo Jaimes Gamboa

Full Stack Developer

PROFILE

Software developer focused on building end-to-end technological solutions, combining web development and data engineering. Specialized in creating scalable applications, user-centered interactive interfaces, and robust services that optimize workflows. Passionate about turning complex challenges into functional software, with high adaptability, technical discipline, and dedication to collaborative work in high-performing teams.

EDUCATION

Vocational Software Development Technician

Campuslads, Floridablanca — 2026

High School Diploma

Colegio Tecnico Industrial Jose Elias Puyana — 2025

EXPERIENCE

RentaTools (Campuslands) | github.com/DanielGamboa-10
Comprehensive machinery rental platform designed for commercial asset management. Engineered secure authentication, relational database persistence, and containerized deployment with Docker. Learned how to build reliable production architectures featuring automated database migrations.

Metrolinea Live (Metrolinea Hackathon) | github.com/DanielGamboa-10
Real-time urban transit tracking, simulation, and incident monitoring system. Developed monitoring logic, event processing pipelines, and dynamic web visualization. Learned rapid problem-solving under pressure in hackathon environments, integrating real-time detection models.

SICA Project | github.com/DanielGamboa-10
Enterprise-grade access control and institutional security management system. Built decoupled persistence layers and role-based access control (RBAC). Learned to guarantee strict transactional integrity, user permission enforcement, and clear architectural separation of concerns.

SKILLS

- Java
- JavaScript
- Spring Boot
- Python
- MySQL
- PostgreSQL
- HTML5 / CSS3
- Git

COMPETENCIES

- Leadership
- Teamwork
- Empathy
- Adaptability
- Discipline
